OUR 10 WEEK PROGRAMS

MUSICAL ENCOUNTERS (ages 0-18 mths)

It's a world of excitement, discovery, and imagination for babies and youngsters, as early sensory awareness and the beginnings of basic coordination skills are encouraged through fun and creative activities.

Classes offer experiences that involve listening, music, rhymes, and guitar/keyboard. The introduction of small percussion instruments allows for free exploration of sounds, while parachute, hoop, and ball games stimulate young minds in a friendly social setting that includes the presence of their carers.

MUSICAL BEGINNINGS (ages 18 mths-2.5 yrs)

Cognitive processing and motor skill development are nurtured in a safe, comfortable environment for little ones and their carers and classes promote auditory and tactile exploration of musical concepts.

These discovery-based sessions provide early encounters with music and include a range of fun activities involving movement, singing, games, puppets and musical instruments.

MUSICAL ADVENTURES (ages 2.5-3.5 yrs)

Social skills and interaction are promoted in classes where toddlers and care providers participate in a range of activities designed to stimulate the young growing mind. These classes incorporate dancing, creativity, singing, and playing instruments to introduce an aural awareness and understanding of music through pitch, beat, rhythm and coordination.

MUSICAL PATHWAYS (ages 3.5-4.5 yrs)

The developing mind is opened to a world of exciting sounds and experiences as young children engage and share in a program of practical and cognitive-based learning.

Musical concepts and skills are furthered through regular hands-on activities in a fun, interactive setting with their accompanying adult present, and music symbols are introduced through stimulating activity sheets. Children are introduced to quality classical music to develop their musical appreciation, gain basic keyboard awareness, and even benefit from live demonstrations of orchestral and band instruments.

“Music is a more potent instrument than any other for education. – Plato”
